Let's Code [1], a project developed by Prof. **Loredana Marzocchella** on the eTwinning platform to introduce students to computational logic, will participate in the "Up to 10 Years Old" Category of the **Global Junior Challenge** [2].

Based on the idea that "coding is for everyone," the project, which was developed in a second-year elementary school class at the Istituto comprensivo **Pestalozzi di S. Antimo** [3] (Naples), introduces children to programming in a fun manner, allowing them to enjoy pixel art and interact in English through Scratch.

The "Let's Code" Platform has involved both Italian and foreign schools that shared their work and videos on the etwinning platform.
